

## Sustainable fashion: the capsule collection of this 16-year-old designer is everything the future needs

Paloma has teamed up with Everybody.World, a sustainable and collaborative fashion brand in Los Angeles, and is making it big on networks

Paloma (anyway, without a surname, like Beyoncé) is a young designer to have on her fashionista radar. The 16-year-old girl is super engaged in the ecological cause and has just signed a collab with Everybody.World, a sustainable label in Los Angeles, which is booming on the internet. The darling of the time is her Luna dress, a reinterpretation of her mother's favorite model in the 90's - do we love it? Yes of course.

The fabrics were handpicked and everything from dead stock (those that are discarded). The inspiration came directly from the closet of the mother of the designer (who, unlike our mother, was a young woman from the 90s, lol). According to Paloma, her mother's dresses were easy and comfortable, but never done well enough that she could wear them for years on end. The stylist's idea was to recreate a version of those **90s** models from sustainable and durable fabrics. Ah! And with the right protection mask to combine, because the moment calls for it!

The vintage dress comes in four **prints** and different colors. It is available in sizes 2XS to 2XL (PPP and XGG). The collection of collaborators from EVERYBODY.WORLD aims to present **young talents** like Paloma. Creative artists, with style, ethics and who bring sustainability to their creations, just like the young woman took to the Luna dress.
